

WMBD

- Decreasing Our Dependency On Foreign Oil Supplies
- Creating Jobs
- Decreasing Greenhouse Gasses By Up To 80%
- Collecting Used Cooking Oil From Local Restaurants

What is Biodiesel?

- Biodiesel refers to a vegetable oil- or animal fat-based **diesel fuel** consisting of long-chain **alkyl** (**methyl**, **propyl** or **ethyl**) **esters**. Biodiesel is typically made by chemically reacting **lipids** (e.g., **vegetable oil**, animal fat (**tallow**)) with an **alcohol**.
- Biodiesel is meant to be used in standard diesel engines and is thus distinct from the **vegetable and waste oils** used to fuel *converted* diesel engines. Biodiesel can be used alone, or blended with petrodiesel.
